1.	<u>GRAIN CONSERVATION ON FARMS, 1947-1948</u>	
	Original order November 1947 . . . . .	50,000
	being revised	
2.	<u>FARM RAT CONTROL CAMPAIGN</u>	
	Original order November 1947 . . . . .	10,000
	Reorders . . . . .	10,000
	On hand . . . . .	4,950
3.	<u>SAVE GRAIN BY DESTROYING RATS</u>	
	Original order November 1947 . . . . .	35,000
	Reorder February 1948 . . . . .	20,000
	On hand . . . . .	1,275
	Reorder pending . . . . .	25,000
4.	<u>POSTER: CONSERVE GRAIN</u>	
	Original order December 1947 . . . . .	75,000
	On hand . . . . .	25,000
5.	<u>RAT CONTROL METHODS PA-41</u>	
	Original order January 1948 . . . . .	75,000
	On hand . . . . .	2,900
	Reorder pending . . . . .	25,000
6.	<u>SAVE GRAIN BY CONTROLLING BANTRY PESTS - OFFC-1</u>	
	Original order January 1948 . . . . .	100,000
	Reorder . . . . .	150,000
	On hand . . . . .	66,400
7.	<u>SAVE GRAIN BY FUMIGATION - OFFC-1</u>	
	Original order January 1948 . . . . .	100,000
	Reorders . . . . .	100,000
	On hand . . . . .	27,000
8.	<u>SAVE FARM-STORED GRAIN FROM INSECTS - OFFC-2</u>	
	Original order received February 1948 . . . . .	150,000
	On hand . . . . .	108,000
9.	<u>SAVE GRAIN BY CUTTING PIG LOSSES - OFFC-3</u>	
	Original order received March 1948 . . . . .	150,000
	Reorder . . . . .	500,000
	On hand . . . . .	152,000
10.	<u>SAVE GRAIN BY CONTROLLING LIVESTOCK PESTS - OFFC-4</u>	
	Original order received March 1948 . . . . .	25,000
	On hand . . . . .	480
	Reorder pending . . . . .	50,000
11.	<u>SAVE CORN FROM THE EUROPEAN CORN BORER - OFFC-6</u>	
	Delivery expected May 6 . . . . .	150,000

12.	<u>SAVE CROPS BY CONTROLLING GRASSHOPPERS - OFFC-7</u>	
	Being distributed . . . . .	150,000
13.	<u>ECONOMICAL DAIRY RATION SAVES FEED - OFFC-5</u>	
	Original order March 1948 . . . . .	150,000
	On hand . . . . .	27,500
14.	<u>SAVE GRAIN THROUGH GOOD PASTURE</u>	
	Will go to printer this week

WEEDING SMALL GRAINS AND CORN WITH 2,4-D

Nationwide interest is being shown by farmers in the new chemical methods of controlling weeds. Considerable information -- and, unfortunately, considerable mis-information -- has been put out on chemical weed killers.

This leaflet explains simply and exactly how the chemical weed-killer 2,4-D can be of value in controlling weeds in small grains and corn. At the same time, it lists cautions which must be observed in order to obtain full benefits from the chemical.

UNITED STATES DEPARTMENT OF AGRICULTURE  
Office for Food and Feed Conservation

ECONOMICAL DAIRY RATION SAVES FEED

It is recognized by livestock specialists that several types of feeding inefficiencies are common to the industry. One arises from failure to feed a balanced ration, thereby keeping the animal from doing as well as it would on a carefully balanced ration. The other arises from failure to select the most economical elements in making up a properly balanced ration, thereby causing the farmer to have higher production costs than are necessary.

This informational leaflet strikes at both inefficiencies. Essentially, it is the same leaflet that was produced in the fall of 1947 by the USDA Bureau of Dairy Industry, coming out now with a "new look" and stressing the need for grain conservation.

UNITED STATES DEPARTMENT OF AGRICULTURE  
Office for Food and Feed Conservation

SAVE GRAIN BY GETTING MORE FEED FROM HAY CROPS

Farmers who are able to feed ample quantities of good quality roughage are able to save grain and make higher profits.

This leaflet presents latest scientific findings on how to preserve hay crops in order to get the most out of them by way of livestock feed.

UNITED STATES DEPARTMENT OF AGRICULTURE  
Office for Food and Feed Conservation

SAVE GRAIN BY CUTTING POULTRY LOSSES

It is estimated that 30 to 40 percent of chickens or adult birds die of unnatural causes, thereby representing a severe loss to the poultry producer.

This leaflet presents a program whereby producers can reduce such losses and thereby contribute both to their own profits and to the goals of the food and feed conservation program.

UNITED STATES DEPARTMENT OF AGRICULTURE  
Office for Food and Feed Conservation

SAVE GRAIN BY CONTROLLING INTERNAL PARASITES

This leaflet points out that internal parasites of livestock are the most insidious of all pests with which farmers have to contend, since they do their work quietly and slyly, nearly always hidden from view.

The leaflet points to the losses in food and feed that result from the actions of internal parasites, and it urges farmers to be vigilant in controlling them.

UNITED STATES DEPARTMENT OF AGRICULTURE  
Office for Food and Feed Conservation

SAVE COTTONSEED FROM INSECTS

Although the value of the cotton crop is customarily weighed in terms of its fibre contribution, it should not be forgotten that the cotton crop also makes a highly important contribution to the Nation's food and feed production.

This leaflet points to the value of cottonseed in terms of food and feed, and urges that special care be exercised to protect this year's cotton crop from insects.
